²⁾ Enter the number from the record of the certificates kept by the continuing education institution, the practical training institution or the vocational training and further training center.

Cover Letter

I have always loved math. Ever since I was a child, solving riddles and calculations brought me joy and satisfaction. I was truly fascinated with it. After finishing high school and not having any idea about what I want to be doing in my life I decided to start getting stem education at AGH. It did not live up to my expectations so I made a decision to quit. Trying to find my calling, I was taking various jobs, most of them as a sports instructor, as I had the necessary experience and certification. During my stay on Hel peninsula, where I used to spend 4-5 months a year as a windsurfing instructor, two of my friends suggested me taking up programming. They were ex-kitesurfing instructors. I decided to give it a go and I fell in love with it straight away. I managed to save up some money for bootcamp and day-to-day living expenses, so I could put all of my focus towards building and expanding my skills. Certainly, it was not easy, but thanks to hard work and discipline I was able to fully understand the topic and gain a solid foundation in IT.

Now I am looking for opportunities to further develop my skills and gain some valuable, hands-on experience dealing with projects. Logical and mathematical thinking are definitely my strengths, and I am able to put in the work to help overcome any challenge. I soak up new information like a sponge and I do not hesitate to ask questions if I am not sure of something. I believe that the internship you offer would be a perfect chance for me to prove how solid of an employee I am as well as show how seriously I think about a career in programming.
